

Genesis was born in Santiago in 1990, where she lived for 15 years. She finished his secondary education in Coyhaique in 2008. In 2009 she entered to study biochemistry at Universidad Austral de Chile in Valdivia graduating in 2014. The undergraduate thesis was made under the tutelage of Dr. Rody San Martin in the Biochemistry Institute at Universidad Austral de Chile, where she realized her interest in understanding the molecular mechanisms by which human pathologies develop. Genesis, with her desire to understand how some diseases occur, decides to enter the PhD in science, with mention in cell and molecular biology given by Universidad Austral de Chile in 2015. After a year of studies, she decided to expand her knowledge in the development of diseases, and she begins working on her PhD thesis at the Center for Scientific Studies under the tutelage of Dr. Carlos Flores. Currently, she is investigating the role of certain ion channels in mouse models with chronic lung disease.
